

AAF-B10 BELT BAG FLATTENER

FEATURES

- Positioned over an elevation or incline conveyor
- Adjustable height and self-levelling
- Gentle on the bag packaging and product
- Heavy duty construction

The AAF-B10 Belt Bag Flattener levels package contents over the full length of the bag prior to palletizing and wrapping to ensure that the pallets are stacked level and in a professional manner.

The bags are fed short side first, onto a conveyor with an overhead powered belt or idler roller action. Height adjustment allows for precise flattening control.
